**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**LISTING OF CLAIMS:**

1. (Currently Amended) A method for use by a network server that streams content over a network to a network receiver, the method comprising:

providing remote network node interface instructions for submitting remote network node content;

transmitting the remote network node interface instructions to a remote network node that is independent of a user associated with a play list;

receiving a request from the remote network node via the transmitted interface instructions to modify the play list, the request including remote network node content information and identification information of the user, the play list being associated with the user identified by the identification information;

determining whether a priority relative to each other item on the playlist is associated with the remote network node content;

modifying the play list associated with the user to include a reference to the remote network node content and, if the priority is determined, modifying the play list based on the determined priority including, based on the determined priority, terminating streaming of currently streaming content and initiating streaming of the remote network node content, the play list identifying content for streaming delivery to a network receiver associated with the identified user; and

causing streaming of the remote network node content to the network receiver associated with the identified user as part of the content for streaming delivery based on the modified play list.

2. (Previously Presented) The method of claim 1, wherein the remote network node content comprises at least one of audio data and video data.
3. (Original) The method of claim 2, wherein the audio data comprises a voice mail message.
4. (Previously Presented) The method of claim 2, wherein the remote network node content comprises a reminder.
5. (Canceled)
6. (Canceled)
7. (Previously Presented) The method of claim 1, wherein the play list identifies generic, shared content in addition to the remote network node content.
8. (Previously Presented) The method of claim 1, further comprising determining whether the remote network node is authorized by the user to submit content.
9. (Previously Presented) The method of claim 1, further comprising:  
    receiving play scheduling information for the content based on the interface instructions;  
and  
    modifying the play list based on the received play scheduling information.
10. (Previously Presented) The method of claim 9, wherein receiving play scheduling information comprises receiving a number of times to stream the remote network node content.
11. (Previously Presented) The method of claim 9, wherein receiving play scheduling information comprises receiving a specified time to stream the remote network node content.

12-14. (Canceled)

15. (Currently Amended) A system for use by a network server that streams a content over a network to a network receiver, the system comprising:

play lists associated with different respective users, the play lists identifying content for streaming delivery to network receivers associated with the respective users;

a processor configured to stream received content and determine whether a priority relative to each other item on the playlist is associated with the received content;

instructions for causing the processor to receive a request from a remote network node to modify at least one play list of the play lists, the request including received content and identification of one user of the different respective users, the one play list being associated with the one user, the remote network node being independent of the one user; and

instructions for causing the processor to modify the one play list associated with the one user to include a reference to the received content and, if the priority is determined, to modify the one play list based on the determined priority including, based on the determined priority, terminating streaming of currently streaming content and initiating streaming of the received content.

16. (Previously Presented) The system of claim 15, further comprising a stream generator for streaming content to the one user based on the play list associated with the one user.

17. (Previously Presented) The system of claim 15, further comprising instructions for causing a processor to transmit interface instructions to the remote network node, the interface instructions for receiving identification of content designated by a content submitter and transmitting the identification to the network server.

18. (Currently Amended) A computer program, disposed on a computer readable medium, for use by a network server that streams content over a network to a network receiver, the computer program including instructions for causing the server processor to:

receive a request from a remote network node to modify a play list, the request including identified content and identification of a specific user at a node of the network other than the remote network node, the play list being associated with the specific user, the remote network node being independent of the specific user;

determine whether a priority relative to each other item on the playlist is associated with the identified content; and

modify the play list associated with the specific user to include a reference to the identified content and, if the priority is determined, to modify the play list based on the determined priority including, based on the determined priority, terminating streaming of currently streaming content and initiating streaming of the identified content, the play list identifying content for streaming delivery to a network receiver associated with the specific user.

19. (Previously Presented) The computer program of claim 18, further comprising instructions for causing the processor to stream the identified content to the network receiver associated with the specific user as part of the content for streaming delivery in accordance with the play list.

20. (Canceled)

21. (Previously Presented) The computer program of claim 18, further comprising instructions for causing the processor to determine whether a submitter of the identified content is authorized by the specific user to submit content for the specific user.

22. (Original) The computer program of claim 18, further comprising instructions for causing the processor to:

receive play scheduling information for the identified content; and  
modify the play list based on the received play scheduling information.

23. (Previously Presented) The computer program of claim 18, further comprising instructions for causing the processor to:

provide interface instructions for submitting content; and  
transmit the interface instructions to the remote network node.

24. (Currently Amended) A computer program, disposed on a computer readable medium, for facilitating content streaming over a network to a network receiver, the computer program including instructions for causing a processor to:

receive input from the remote network node including remote network node content and user information for modifying a play list associated with the user;

receive input from the remote network node identifying the user to receive streaming delivery of the remote network node content, the user being a network node other than the remote network node;

determine whether a priority relative to each other item on the playlist is associated with the remote network node content;

form a request at the remote network node to modify the play list of the user to include the remote network node content and, if the priority is determined, to modify the play list based on the determined priority including, based on the determined priority, terminating streaming of currently streaming content and initiating streaming of the remote network node content; and

transmit the request, the input including the remote network node content and the input identifying the user to the network server.

25. (Previously Presented) The computer program of claim 24, further comprising instructions for causing a processor to:

receive input from the remote network node identifying play scheduling information for the remote network node content; and

transmit the input identifying play scheduling information to the network server.

26. (Previously Presented) The computer program of claim 24, wherein the computer program comprises instructions for a graphical interface defined by markup language instructions.

27. (Canceled)

28. (Previously Presented) The method of claim 1, wherein modifying the playlist comprises ordering an entirety of the playlist based upon relative priorities of each item of remote network node content.

29. (Previously Presented) The system of claim 15, wherein the processor is configured to modify the playlist by ordering an entirety of the playlist based upon relative priorities of each content item.

30. (Previously Presented) The computer program of claim 18, further including instructions for causing a processor to modify the playlist by ordering an entirety of the playlist based upon relative priorities of each content item.

31. (Previously Presented) The computer program of claim 24, further including instructions for causing a processor to modify the playlist by ordering an entirety of the playlist based upon relative priorities of each item of remote network node content.

32. (New) The method of claim 1, wherein receiving play scheduling information comprises receiving an indication of whether to delete the remote network node content after streaming the remote network node content a predetermined number of times.

33. (New) The system of claim 15, wherein the processor is configured to receive an indication of whether to delete the received content after streaming the received content a predetermined number of times.

34. (New) The computer program of claim 18, further including instructions for causing a processor to receive an indication of whether to delete the remote network node content after streaming the identified content a predetermined number of times.
